THE RISK MANAGEMENT MODEL

**See it**
Walk around the workplace with the staff and look for hazards. Use a checklist if you want and make a list of all the hazards you can see.

**Assess it**
Once the list has been made, consider the likelihood and consequences of an accident.

**Fix it**
Develop and put in place controls that minimise the risk of something happening or of somebody being hurt. Fix it before it causes damage.

**Evaluate it**
Review how effective the control you put in place was and consider whether or not you need to take further action.
